

INNOVATIVE FALL PROTECTION

"YOUR LIFELINE TO SAFETY"

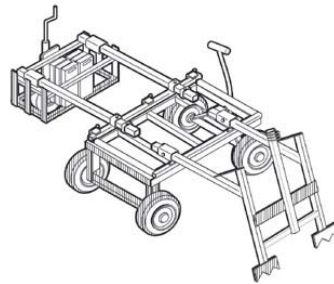

Model: PR-600

Name: Mobile Fall Protection System

The PR-600 Mobile Fall Protection System was designed to be used on top of flat roofs. This fall protection system clamps to a standard utility roof cart and can be adjusted to fit onto all standard utility carts. This allows the PR-600 to be moved easily along the roof's top by simply pulling the cart to the desired location, then turning the handle on the Wheel Jack lifts the Ballast Weight and lowers the Pivot Arms, so that they touch onto the roof's deck, setting the fall protection system in place. The PR-600 System resists the horizontal load of a workers fall by driving the pivot plates into the roof membrane and creating a pivot point. The worker's horizontal fall overturning moment about the pivot point is then resisted by an opposite movement created by the ballast weights. If there is no horizontal load on the mast then the pivot points will NOT penetrate the roof.

Product Features:

- Provides Fall Arrest for 2 workers and Fall Restraint for 1 worker
- Meets O.S.H.A. Compliance 1926.502 D Fall Arrest Anchor
- Clamps to any standard 3 or 4 wheel Roof Trailer
- Easily pulls to working locations on roof
- Can be assembled and dismantled by one person
- Engineered by Group Eight Engineering and has been through a full line of steel drop weight tests and dynamic load tests by Intertek NA. Testing Services.

INNOVATIVE FALL PROTECTION

"YOUR LIFELINE TO SAFETY"

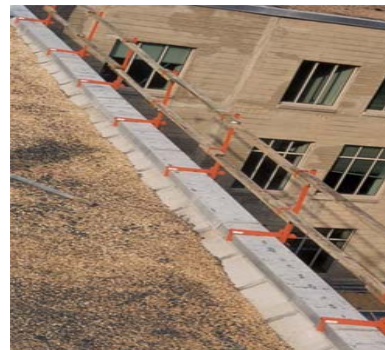

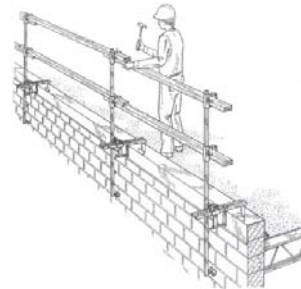

Model: PR-100

Name: Safety Roof Rail

The PR-100 Safety Roof Rail was designed by roofers for ease and practicality combined with maximum strength for use in the roofing industry. It is comprised of a Stanchion and a compression bracket. Also available are two separate [mounting brackets](#) to fit different applications.

Product Features:

- Meets and exceeds O.S.H.A. & W.C.B. requirements
- Accommodates: parapets and cant strips
- Provides unobstructed access to roof edge
- Easy to install
- Light weight and rugged
- Tested to provide maximum safety
- Weighs less than 22 lbs and can be easily installed by just one person

INNOVATIVE FALL PROTECTION

"YOUR LIFELINE TO SAFETY"

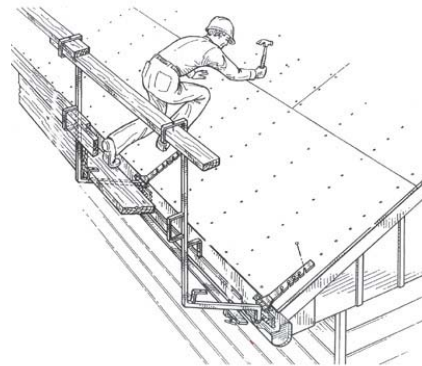

Model: PR-20

Name: Eave Catchguard

The PR-20 Eave Catchguard is the ultimate platform guardrail system that sets up in minutes and provides the roofer with maximum fall protection. The PR-20 was tested and engineered to withstand fall impacts while providing a continuous working platform that catches falling debris, materials and tools. The PR-20 doesn't interfere with the roofing process, dismantles quick and easy and takes up little storage space.

Product Features:

- Tested at Warnock Hersey Laboratory in accordance with M.O.L., O.S.H.A. and W.C.B. Fall Arrest
- Inexpensive, lightweight, rugged and easy to install
- Can be installed easily by just one person in minutes
- Fits around corners and does not interfere with eavestroughs
- Can be installed from a ladder or from the roof
- Creates worker confidence and therefore increases production while protecting the grounds below and reducing costly cleanup time
